

# Super Star Trek

---

A version of the classic game reworked to support running as a BBS door. Now displays ANSI color and attribute settings.

Official support sites: [Official Github Repo](#) - [Official Forum](#)

## Installation Steps

---

- i. Extract files from .zip (You already did this, right?)
- ii. **mkdir -p /sbbs/doors/sst**
- iii. **cp sst sst.doc SST\_Logo.txt /sbbs/doors/sst**

Run scfg and add a new door with these settings:

1. **startup directory:** sst
2. **command line:** ./sst
3. **multiple concurrent users:** yes
4. **native executable:** yes
5. **use shell to execute:** yes
6. **pause after execution:** yes
7. everything else defaults...

—

Thats it!
