Super Star Trek

A version of the classic game reworked to support running as a BBS door. Now displays ANSI color and attribute settings.
Official support sites: [Official Github Repo](#) - [Official Forum](#)

Installation Steps

  i. Extract files from .zip (You already did this, right?)
 ii. **mkdir -p /sbbs/doors/sst**
iii. **cp sst sst.doc SST_Logo.txt /sbbs/doors/sst**

Run scfg and add a new door with these settings:
startup directory: sst
command line: ./sst
multiple concurrent users: yes
native executable: yes
use shell to execute: yes
pause after execution: yes
everything else defaults…

–
Thats it!
